Summary

Final year BTech student and full-stack developer with experience in real-time web apps, clean UI, and efficient backend systems. Have strong foundation in Java, responsive design, and building practical solutions through hands-on projects.

Education

Bachelor of Engineering, Vidyavardhaka College of Engineering *Expected: 2026*
Information Science Engineering **CGPA: 8.49**

Coursework: Data Structure and Algorithms, Computer Networks, Operating Systems, RDBMS, Software Engineering, Design and Analysis of Algorithms.

Skills

Languages: C, Java, JavaScript .

Web Technologies:

- **Frontend:** ReactJS, TailwindCSS, GSAP, Framer-Motion, Axios .
- **Backend:** NodeJS, ExpressJS, REST API, WebSocket, Caching, Rate limiting .

Databases: MySQL, MongoDB, Mongoose, Supabase .
Hosting & Deployment: CI/CD, Github Actions, Render, Docker .

Experience

Internship Program — IBM SkillBuild **Jul 2024 – Aug 2024**
Remote, Mysore, India

- Integrated a Dialogflow chatbot with backend APIs to automate user query handling around the clock, reducing repeated questions and enhancing support efficiency.
- Achieved 75–80% answer accuracy by configuring Dialogflow for real-time responses to frequently asked queries, improving overall user satisfaction.

Projects

Intelligent Personal Expense Dashboard | GitHub | Live Demo

- Built a web application using React (Vite), Tailwind CSS, and WebSocket that allows users to add, categorize, and visualize their expenses through real-time updates and interactive charts; configured MongoDB to efficiently manage 10,000+ user records with indexed queries, reducing average data fetch time by 35% and supporting up to 500 concurrent users without performance issues.

EcoSnap – AI powered Waste Management | GitHub

- Built a waste segregation app that classifies waste using MobileNetV2 trained on 25K+ labeled images with 98% accuracy, and interprets user voice input through BERT-based NLP. Integrated region-specific disposal guidance using user location data to suggest proper waste handling methods. The system features a responsive frontend in React (Vite), TypeScript, and Tailwind CSS, with a FastAPI backend for model inference and data handling.

AI Powered Code reviewer | GitHub | Live Demo

- Built CleanCode, an AI-powered code review tool that analyzes code in real-time to suggest improvements and enforce best practices. Integrated React.js, TailwindCSS, and OpenAI to create an interactive editor with syntax highlighting and instant feedback. Helped reduce common bugs and style issues by 60% and cut down manual review effort by 40%, improving code quality and development speed for individual developers and small teams.

Certifications

- Developing Backend Apps With Node, Express – Meta
- Advanced React and principles of UI/UX design – Meta
- Google Cloud Career Launchpad – Google

Achievements

- Placed 5th in Infothon 4.0, a national-level hackathon, for building an AI-driven waste management system with 98% classification accuracy.
- Solved 90+ DSA problems as part of self-paced preparation for interviews and development challenges.
- Ranked 5th position in CodeHunt, a national-level coding and UI design competition .
