Summary

Final-year BTech student and full-stack developer with experience in real-time web applications and efficient backend systems. Strong foundation in Java and responsive design, also have a keen interest in contributing to software development companies.

Education

Bachelor of Engineering, Vidyavardhaka College of Engineering *Expected: 2026*
Information Science Engineering **CGPA: 8.49**

Coursework: Data Structure and Algorithms, Computer Networks, Operating Systems, RDBMS, Software Engineering, Design and Analysis of Algorithms.

Technical Skills

Programming Languages: C, Java, JavaScript, SQL.
Frontend Technologies & Design Tools: HTML, CSS, React.js, Tailwind CSS, GSAP, Figma, Sketch, Spline.
Backend Technologies: Node.js, Express.js, RESTful APIs, WebSocket, Redis.
Databases: MySQL, MongoDB, Supabase, Mongoose.
DevOps & Deployment: CI/CD, GitHub Actions, Docker, Render.

Experience

Internship Program — IBM SkillBuild **Jul 2024 – Aug 2024**
Remote, Mysore, India

- Integrated a Dialogflow chatbot using backend APIs to automate user query handling, reducing repetitive questions and providing 24/7 basic support.
- Achieved approximately 70% response accuracy for common queries through optimized intent training, contributing to improved user experience and reduced support load.

Projects

AI-Powered Code Review | GitHub | Live Demo

- Implemented CleanCode, an AI-powered code review tool that analyzes code with 80% accuracy tested on 12+ code samples, reducing manual review time by 35%. Integrated real-time feedback and quality metrics to improve code maintainability.

Intelligent Personal Expense Dashboard | GitHub | Live Demo

- Programmed a responsive expense dashboard using React (Vite), Tailwind CSS, and WebSocket for real-time expense tracking and interactive charts. Configured MongoDB via indexed queries to manage several records, reducing data fetch time by 35%. Optimized performance to handle 5+ concurrent users without lag or downtime. Added analytics for category-wise and monthly insights, improving user engagement and decision-making efficiency.

EcoSnap – AI powered Waste Management | GitHub

- Initiated an AI waste segregation app using MobileNetV2 (98% accuracy on 25K+ images) via BERT-NLP for voice commands. Added gamified rewards and location-based disposal guidance. Developed frontend using React+Vite and TypeScript. Created FastAPI backend for real-time model inference.

Match-Alert-Microservices | GitHub

- Designed an Esports microservice backend with RabbitMQ (0.3 msg/sec) for event-driven alerts (e.g., tournament creation emails) and Docker for scalable containerization. Achieved efficient orchestration with 2 active connections, 7 exchanges, and 16-core resource allocation.

Certifications

- Developing Backend Apps With Node, Express – Meta
- Advanced React and principles of UI/UX design – Meta
- AWS Cloud Technical Essentials – edX

Leadership & Achievements

- Placed 5th in Infothon 4.0, a national-level hackathon, for building an AI-driven waste management system with 98% classification accuracy.
- Solved 90+ DSA problems across multiple platforms as part of interview and skill-building preparation.
- Team Lead – Achieved 5th position in CodeHunt, a national-level coding and UI/UX design contest.
