Summary

Backend developer with a good foundation in **MERN stack and Java**, currently exploring the world of **backend development**. Always eager to learn and improve, with a focus on building reliable solutions for real-world challenges. Driven by curiosity and creativity, crafting digital dreams one line at a time.

Education

Bachelor of Engineering, Vidyavardhaka College of Engineering *Expected Graduation, 2026*
Information Science Engineering **CGPA: 8.49**
Coursework: Data Structures and Algorithms, Computer Networks, Operating Systems, RDBMS, Software Engineering, Design and Analysis of Algorithms.

Work Experience

Internship Program — IBM SkillBuild **Jul 2024 – Aug 2024**
Remote - Mysore, India

- Engineered an advanced **Dialogflow** chatbot integrated with REST APIs, enabling **24/7 automated support** and reducing repetitive query handling by leveraging **HTML/CSS, JavaScript, and Python**.
- Optimized intent classification pipelines, boosting accuracy and reducing response latency through refined datasets and in-depth analytics using **Pandas, NumPy, and Scikit-learn**.
- Collaborated on enhancing backend API workflows, ensuring reliable data exchange between the chatbot and external systems.

Projects

Personal Expense Dashboard | Live Demo **Tech Stack: MongoDB, Express.js, React, Node.js, JWT, Bcrypt**

- Designed a full-stack expense tracking app for logging, categorizing, and analyzing expenses, with secure **JWT/Bcrypt authentication**, real-time category/month filters, and handling for **10–20 concurrent users**.
- Streamlined backend queries and refined UI responsiveness, reducing page load time, improving data retrieval, and ensuring a smoother, more reliable user experience.

AI-Driven Waste Management | GitHub **Tech Stack: React, Tailwind, FastAPI, Python, MobileNetV2, BERT**

- Built an AI-powered waste classification platform achieving **98% accuracy** on **25K+ images** using **MobileNetV2**, and integrated voice-command functionality with **BERT** for improved accessibility and interaction.
- Increased engagement and usability by introducing gamification and providing real-time, location-based disposal suggestions through optimized **FastAPI** endpoints, enhancing API efficiency.

Match Alert Microservices | GitHub **Tech Stack: Node.js, Express.js, MongoDB, RabbitMQ, Docker, Jest**

- Created a microservices-based backend for Esports match alerts, implementing **RabbitMQ** for message queueing.
- Deployed and maintained **Dockerized microservices** on a **16-core server** with **2 active connections, 2 queues, and 7 exchanges**, ensuring consistent message delivery and testing reliability using **Jest**.

Technical Skills

- **Programming Languages:** Java, JavaScript, SQL.
- **Frontend Development:** HTML, CSS, React, Tailwind CSS, GSAP.
- **Backend Development:** Node.js, Express.js, REST APIs, Jest, Microservices.
- **Databases:** MySQL, MongoDB, Supabase.
- **DevOps & Tools:** CI/CD, GitHub Actions, Docker, Render, Git.

Achievements

- Ranked 4th in Infothon 4.0, a national-level hackathon, for developing an AI-driven waste management solution with **98%** accuracy.
- Solved **90+ DSA problems** on coding platforms to prepare for interviews.
- Led a team to 5th place in a national-level coding and UI/UX design contest.

Certifications

- Developing Backend Applications with Node.js and Express.js – Meta (Feb 2024)
- Advanced React and Principles of UI/UX Design – Meta (Feb 2024)
- Full-Stack JavaScript Development – IBM (Dec 2024)
